

**IN THE SPECIFICATION**

**Please insert the following paragraph, with reference to the application as originally filed, following the paragraph ending at page 6, line 9 and before the paragraph beginning on page 6, line 10:**

FIG. 20 is a block flow diagram of a method according to an example embodiment.

**Please insert the following paragraph, with reference to the application as originally filed, following the paragraph ending at page 53, line 11 and before the paragraph beginning on page 53, line 12:**

FIG. 20 is a block flow diagram of a method 2000 according to an example embodiment. The method 2000, in some embodiments, includes presenting 2002 a user with options for tailoring an object class definition and receiving 2004 user input for tailoring the object class definition in response to the presenting 2002 of options. Receiving 2004 the user input includes receiving 2004 input identifying a first field and a second field to be included in the tailored object class definition a first user or group of users, and a second user or group of users. The method 2000 further includes tailoring 2006 the object class definition to include the first field and the second field. The method 2000 additionally includes associating 2008 a first identifier with the first field to identify that the first user or group of users is to be excluded from a first activity that involves the first field and associating 2010 a second identifier with the second field to identify that the second user or group of users is to be excluded from a second activity that involves the second field. The method 2000 then includes making 2012 the association of the first identifier with the first field and the association of the second identifier with the second field available for data processing activities to exclude the first user or group of users from the first activity and the second user or group of users from the second activity.
